Remote Workforce Cyber-Ed

Course Description

With the rapid escalation of COVID-19, organizations are having to rapidly adapt to limit contact and person-to-person contamination. Over the past several weeks, organizations around the world have instituted remote, work-from-home policies. While some organizations have maintained a robust remote work structure for years, many organizations have had few remote workers and restricted employees to work from home. And even for organizations that have maintained a remote workforce, the breadth and depth of remote work have dramatically increased. Business units and functions that have never been done remotely are now required to operate in a fully remote mode. During these rapid changes, security experts are rightly pondering what new risks may be introduced.

Most experts believe businesses are putting their company at risk because of unmanaged employees' devices and lack of employee awareness training. Because of the COVID-19 pandemic, there is nothing businesses can do but start as soon as possible in bringing their employees devices up to speed along with employee awareness training

Cyber Education is here to help!
